

MULTIEYE®

Number Plate Recognition | Gate and Traffic

The MULTIEYE ANPR number plate recognition offers numerous application possibilities and advantages:

- Automatic gate opening
- Staff savings
- Constant availability
- Fast processing of entries and departures
- Security for the company through access control
- Proof of entry and departure
- Management of parking space capacities
- Optimization and proof of vehicle dwell time
- Geo marketing
- Analysis of customers catchment area

The automating of entries and departures saves money and manages access authorizations to the premises. The dwell time of vehicles can be tracked and analyzed, this offers e.g. optimized logistics. On parking decks the number plate recognition prevents misuse by long-term parking. For the return of rental cars – after opening hours or at unstaffed stations – the actual return times are recorded. At the same time possible damage can be documented by high-resolution cameras.

MULTIEYE system

Recording of number plates with chronological synchronism in database
 ▶ Tracks 2 lanes
 ▶ Expandable by upgrade to more lanes

The MULTIEYE ANPR is used as well-priced add-on software module with MULTIEYE video recorders. The number plates are stored synchronously with the video recording in a database. The standard software module tracks number plates on 2 lanes. Through software upgrade more lanes may be added. The ANPR software can be run on an external server to avoid additional load on the recorder.

ANPR Bullet 2MP IP-Kamera
 Artikel-Nr. 110040

The MULTIEYE number plate recognition is available in two designs: Traffic and Gate. Analog as well as IP-cameras are supported. We recommend our ANPR bullet 2MP IP-camera to achieve best results.

Number plates from up to 125 different countries are recognized.

In addition to the MULTIEYE number plate recognition software upgrades Gate and Traffic we offer plug-and-play number plate recognition systems.

MULTIEYE ANPR type Gate

2-channel software module for the recognition and recording of number plates and the analysis of a "black and white list" for the control of entering and departing vehicles, time-controlled access control, database ring buffer function, email notification with snapshot, standard analysis tool, encoded MySQL database (not accessible to customers).

▶ Article no. 810178

MULTIEYE ANPR type Traffic

2-channel software module, same as Gate with accessible MySQL database for customer-specific applications and further processing as well as premium analysis tool, instant display of number plates and recordings and numerous filter functions.
